FINAL EXAMINATION

TRIMESTER 2, 2022/2023

BFN2114 – INVESTMENTS

8 July 2023
9.00 a.m – 11.00 a.m
(2 Hours)

INSTRUCTIONS TO STUDENTS

1. This question paper consists of EIGHT **(8)** printed pages with four **(4)** questions, list of formulae and 4 financial tables *excluding* the cover page.
2. Attempt **ALL** questions.
3. Please write all your answer in the **Answer Booklet** provided.
4. Marks are shown at the end of each question.

There are FOUR (4) questions. Answer ALL.

Question 1 (25 Marks)

(a) During the past year, you owned two stocks that had the following annual rates of return:

Year	Stock Terrific	Stock Bright
1	0.19	0.08
2	0.08	0.03
3	-0.12	-.09
4	-0.03	0.02
5	0.15	0.04

(i) Compute the *arithmetic mean* annual rate of return for each stock. Which stock is most desirable by this measure?

(7 marks)

(ii) Compute the *standard deviation* of the annual rate of return for each stock. By this measure, which is the preferable stock?

(7 marks)

(iii) Compute the *coefficient of variation* for each stock. By this relative measure of risk, which stock is preferable?

(7 marks)

(b) A risk premium is the investment return an asset is expected to yield in excess of the risk-free rate of return. Investors expect to be compensated for the risk they undertake when making an investment. This comes in the form of a risk premium. Briefly discuss any two (2) of the five fundamental factors that influence the risk premium of an investment.

(4 marks)

Continued...

Question 2 (25 Marks)

(a) Gemilang Bhd. has just issued a RM1,000 par value zero-coupon bond with an 8 percent yield to maturity, due to mature 15 years from today. (*Assume **semiannual** compounding.*)

(i) What is the market price of the bond?

(5 marks)

(ii) If interest rates remain constant, what will be the price of the bond in three years?

(5 marks)

(iii) If interest rates rise to 10 percent, what will be the price of the bond in three years?

(5 marks)

(b) As an analyst, you are forecasting the market P/E ratio using the dividend discount model. Because the economy has been expanding for nine years, you expect the dividend–payout ratio will be at its low of 50% and that long-term government bond rates will rise to 5%. Because investors are becoming less risk averse, the equity risk premium will decline to 2.5%. As a result, investors will require a 9 percent return, and the return on equity will be 12 percent.

(i) What is the expected growth rate?

(3 marks)

(ii) What is your expectation of the market P/E ratio?

(4 marks)

(iii) What will be the value for the market price if the expectation is for earnings per share of RM100?

(3 marks)

Continued...

Question 3 (25 Marks)

(a) Century Bhd latest annual dividend of RM1.25 a share was paid yesterday and maintained its historic 7 percent annual rate of growth. You plan to purchase the stock today because you believe that the dividend growth rate will increase to 8 percent for the next three years and the selling price of the stock will be RM40 per share at the end of that time.

(i) How much should you be willing to pay for the Century Bhd stock if you require a 12 percent return?

(8 marks)

(ii) What is the maximum price you should be willing to pay for the Century Bhd stock if you believe that the 8 percent growth rate can be maintained indefinitely and you require a 12 percent return?

(5 marks)

(b) Briefly discuss three (3) disadvantages of the constant-growth dividend discount model in its application to investment analysis.

(12 marks)

Question 4 (25 Marks)

(a) Briefly explain the concept of the efficient market hypothesis (EMH) and each of its three forms—weak, semistrong, and strong.

(9 marks)

(b) Briefly discuss the implications of the efficient market hypothesis for investment policy as it applies to:

(i) Technical analysis in the form of charting

(3 marks)

(ii) Fundamental analysis

(3 marks)

(c) Briefly explain two (2) of the major roles or responsibilities of portfolio managers in an efficient market environment.

(10 marks)

End of Questions

BFN2114 List of Formulae

$$\text{Arithmetic Mean (AM)} = \sum_{i=1}^{n} \frac{\text{HPY}_i}{n}$$

$$B_0 = \frac{I}{r}\left[1 - \frac{1}{(1+r)^n}\right] + \frac{M}{(1+r)^n}$$

$$\text{Coefficient of Variation} = \frac{\text{Standard Deviation}}{\text{Expected Return}}$$

Dividend payout ratio= Dividend per share (DPS)/ Earnings per share (EPS)

Expected Growth Rate= retention rate x return on equity

Gordon model= $D_1/ (r-g_1)$

Market Price = Earnings per Share x Market P/E Ratio

P/E= Dividend payout ratio/ (r-g)

$$\text{Standard Deviation } (\sigma) = \sqrt{\sum_{i=1}^{n} [R_i - E(R_i)]^2/n}$$
